

# Filtration Protection System

## 55 Series

### Basic Installation

Determine system location

Locate fresh air intake and remove fresh air filter

Create manifold to size of fresh air intake housing.  
Install Flange Kit onto the manifold.

Seal perimeter of fresh air intake with silicone.

Attach manifold to housing

Drill 3" hole in filter housing cover in location of fresh air intake.  
Replace filter housing cover and seal around pipe.

Add elbow / coupling to inlet.

Add 3" smooth wall pipe to extend to Filtration Protection System

Connect pipe to FPS with elbow / coupling
